

CLAIMS

1. A method of testing an operational integrated software system, said system comprising a plurality of software elements, said method comprising the steps of:
- 5
- a) automatically registering each active element of software in a registry;
 - b) associating a set of test criteria with each registered element of software;
 - c) selecting an element registered in the registry and testing the element
 - 10 in accordance with the associated set of test criteria; and
 - d) capturing the results of the testing of the element and comparing them to the associated test criteria.
2. A method according to Claim 1 in which each element of software is arranged
- 15 to automatically register an identification of itself in the registry.
3. A method according to Claims 1 or 2 in which each element of software is arranged to capture the results of its testing.
- 20 4. A method according to any of Claims 1 to 3 further comprising the step of automatically providing a report on the results of the testing.
5. A method according to any preceding claim in which the test criteria are defined using a scripting language and said method further comprises the step of
- 25 parsing the test criteria to convert them into a form for testing against.
6. An apparatus for testing an operational integrated software system, said system comprising a plurality of software elements, said apparatus comprising:
- 30
- a) means for the automatic registration of each active element of software;
 - b) means for associating a set of test criteria with each registered element of software;

SUBP1

- c) means for selecting a registered element of software and testing the element in accordance with the associated test criteria; and
- d) means for comparing the results of the testing of the element against the associated test criteria.

5

7. An apparatus according to Claim 6 in which each element of software is provided with means for automatically registering itself.

8. A method according to Claim 6 or 7 in which each element of software is
10 provided with means for capturing the results of its testing:

9. An apparatus according to any of Claims 6 to 8 further comprising means for producing a report of the results of testing an element of software.

15 10. An apparatus according to any of Claims 6 to 9 in which the test criteria are defined using a scripting language and the apparatus further comprises means for parsing the test criteria to convert them into a form for testing against.

11. A data carrier loadable into a computer and carrying instructions for causing
20 the computer to carry out the method according to Claim 1.

12. A data carrier loadable into a computer and carrying instructions for enabling
